| Annotation  | Validates that...   | On property of type...         |
|-------------|---|--------------------------------|
| @NotNull    | Property value is not null.                                   | Any                            |
| @AssertTrue | Property value is true.                                       | Boolean                        |
| @Size       | Property value has a size between the attributes min and max. | String, Collection, Map, Array |
| @NotEmpty   | Property is not null or empty.                                | String, Collection, Map, Array |
| @Max        | Property has a value no larger than the value attribute.      | Numeric fields                 |
| @Min        | Property has a value no smaller than the value attribute.     | Numeric fields                 |
| @Email      | Property is a valid email address.                            | String                         |
| @NotBlank   | Property is not null or whitespace.                           | String                         |

request param  
apikey  
t → movie name

if movie is present on imdb

no matter what rating user has enter  
but display the imdb rating

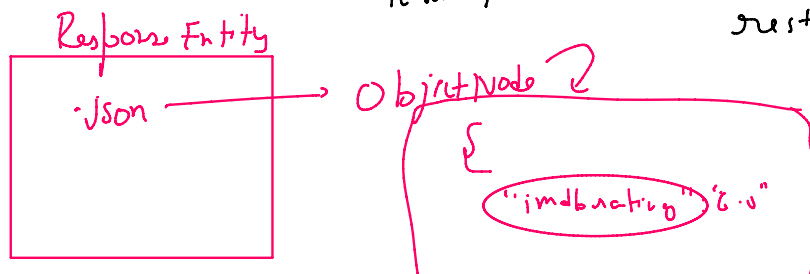

```
{
  "title": "Spiderman"
}
```

Spring → programmatically  
how to call an API

<https://www.omdbapi.com/?apikey=a8431cee&t=>  
append  
title = Spiderman

RestTemplate → object to call external  
rest API
